# PEOPLE TRACKER

THE SOLUTION FOR TOURS SECURITY TRACKING AND PROTECTION

PEOPLE TRACKER OVERVIEW

PEOPLETRACKER is the solution based on RFID technology that enables the tracking of the people involved in tours. PEOPLETRACKER is the right solution for companies and agencies that organize tours and visits to museum, parks, cities, etc. Thanks to a WEB APP and an ANDROID/IOS APP, travelers can be checked and organizers can be sure that everybody is tracked.
The design of the tours and the reporting are created and managed in the WEB APP but all the main activities are performed by using smartphone/tablet with Android or IOS systems.

PEOPLETRACKER: COUNTING AND IDENTIFICATION

PEOPLETRACKER is the solution based on RFID technology that enables the tracking of the people involved in tours. Each person is identified by a RFID bracelet encoded at the beginning of the tour, that enables the automatic access to any place planned and previously configured in the visit (gallery, museum, facility, etc.). It can also be adopted as a check-in when going onboard a bus, to verify the identity of each person involved in the tour. All the information related to people positions through time, fed by portable devices or RFID Stations are synchronized with a web application and made available for management purpose on desktop, tablet and smartphone.
